## PROFILE

Enthusiastic MERN Stack Developer with a solid grasp of front-end and back-end technologies, seeking an entry-level position to apply my theoretical knowledge and practical skills. Eager to contribute to a dynamic development team and enhance my expertise in building robust web applications.

## PROJECTS:

### E-Commerce Platform with EJS

- Developed a dynamic e-commerce platform using EJS templating engine to render product listings and details.
- Implemented user authentication and authorization for secure registration, login, and order placement.
- Designed interactive and responsive interfaces using HTML5, CSS3, and EJS, ensuring seamless user experience.
- Integrated MongoDB for data storage and retrieval, allowing users to browse and purchase products.

## ACADEMIC PROJECT:

### Bluetooth control data logger robot

- Led a team project to design and build a robot capable of collecting data and being controlled via Bluetooth communication.
- Developed the robot's firmware using Arduino programming, enabling data logging from onboard sensors.
- Created a mobile app using React Native to establish a Bluetooth connection and control the robot remotely.
- Implemented real-time data visualization on the app, displaying sensor readings and allowing for data analysis.
